Vankor Field, Russia

Safe Food Storage in Arctic Conditions!

The award winning commercial refrigeration manufacturer Foster Refrigerator has recently participated in a project supplying coldrooms to the remote Vankor Oil Field in the Russian territory of Krasnoyarsk. This region has little infrastructure and suffers from severe environmental conditions with winter temperatures falling below -50°C. In order to make this project a success Foster worked closely with both Hepburn Associates and their local service partner Küppersbusch Großküchentechnik GmbH to overcome some significant logistical challenges.

The oil field at Vankor is located 100km north of The Arctic Circle and access is therefore extremely difficult. As a precautionary measure a standby facility was built into the refrigeration systems as the oil field's remote location would make it very difficult to resolve any potential refrigeration system failures within normal response times. The Foster export team also assisted in obtaining specific documentation and certification that is essential for goods entering the region.

Foster supplied two bespoke coldrooms and a large freezer room designed to store food supplies for the oil field workers. Foster's tailor made coldrooms provide the client with the opportunity to maximise storage space by choosing the exact size of room to match site dimensions rather than a 'best fit' choice from a pre-determined standard module range. Furthermore Foster's export sales staff have extensive experience in coldroom design and use this to ensure that exactly the right specification of room is selected for each individual site and application.

As Europe's market leading manufacturer of commercial refrigeration equipment, Foster Refrigerator was the obvious choice of supplier for Hepburn Associates.

Vankor Field chose:

2x

Single Compartment Coldrooms

1x

Single Compartment Freezer Room

CLIENT:	VANKOR FIELD
PROJECT:	FOOD STORAGE FOR OIL WORKERS
CONSULTANT:	HEPBURN ASSOCIATES
INSTALLATION:	Küppersbusch Großküchentechnik GmbH
LOCATION:	RUSSIA

“ We chose Foster to work with us on this project due to their experience in design, specification and extensive work overseas. Their complete package of information and documentation was most helpful when exporting this equipment via Russia ”
