

The Falkirk Spirit

Taking on the responsibility of supplying food to other smaller hospitals in the area meant that Falkirk Royal Infirmary's kitchen facilities needed to receive a radical overhaul. Extra cold storage was needed to enable the hospital to benefit from buying in bulk and the choice of equipment had to ensure that all food hygiene regulations were taken into consideration.

Total Refrigeration installed coldrooms from Foster Refrigerator throughout as this provided the maximum storage, preparation and work space. Equipment included a new temperature controlled chiller room for sandwich and salad preparation enabling staff to work in a food safe environment of between 8-10°C.

Foster equipment was chosen because of its' renowned reliability and excellent value for money through OGCbuying.solutions. Foster supplies a full range of cutting-edge refrigeration equipment including coldrooms, cabinets, undercounter models and blast chillers & freezers, as well as drinks service equipment, bakery refrigeration and temperature monitoring.

“We see Foster as the market leader and our new equipment has enabled us to provide a cleaner, brighter, safer working environment for our staff”

Kenneth Burrell, Catering Manager at Falkirk Royal Infirmary, has been very impressed with the new equipment in the kitchen, which re-opened just before Christmas. "We chose equipment from Foster Refrigerator as we had previously used older Foster models and had been delighted with the reliability. We see Foster as the market leader and our new equipment has enabled us to provide a cleaner, brighter, safer working environment for our staff."

The food prep area

Foster coldroom with Duet Refrigeration system and Foster shelving

Falkirk Royal Infirmary Chose:

- A suite of single and dual compartment coldrooms complete with Duet Refrigeration, Shelving systems and Ice Spy temperature monitoring systems
